contact.naseer19@gmail.com | +919483367160 | [LinkedIn](#) | [GitHub](#)

Skills

Languages: Python, Bash/Shell Scripting, SQL

Cloud & Infra: AWS (EC2, S3, EMR, IAM, CloudWatch, Lambda, DynamoDB), Linux Administration

SRE & Observability: Prometheus, Grafana, Elasticsearch, Incident Response, Capacity Management

DevOps & Tools: Kubernetes, Docker, Terraform, GitHub Actions, CI/CD Pipelines

AI & Dev Tools: Claude Code, Google Gemini, GitHub Copilot, Cursor AI

Work Experience

TCS, Hyderabad

Aug 2024 - Apr2026

Programmer Analyst (IoT.DE – Cloud, SRE)

- Designed and maintained **observability pipelines** (CloudWatch, Prometheus, Grafana) across a 50K+ user AWS multi-account environment, reducing MTTR by 35% through proactive alerting and monitoring dashboards.
- Built a **Python automation framework** to identify and disable idle report services with zero usage or empty data, cutting operational overhead by **80%** and eliminating wasteful compute consumption — a direct SRE automation win.
- Led **capacity management** initiative auditing unused AWS resources and enforcing S3 lifecycle/expiration policies, delivering **\$20,000+ annual cost reduction** while improving infrastructure reliability.
- Managed **Linux-based production infrastructure**, contributing to on-call incident response rotations; drove root cause analysis and implemented automated remediation scripts to prevent recurring failures.
- Architected **AWS Multi-account VPC** networking with IAM boundaries and security group policies, improving availability and operational efficiency across distributed engineering teams.

Stack: AWS (EC2, S3, EMR, IAM, CloudWatch, Lambda), Python, Linux, Prometheus, Grafana, Kubernetes, Docker, SQL

Education

SUK, Kalaburagi

Dec 2021 - Jul 2024

Bachelors in Computer Applications (BCA)

CGPA: 8.2/10

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Fundamentals of AI, Web Technologies, Cloud Computing, Digital Electronics.

Project Work

- E-Commerce platform for local merchants (2026):** Designed a scalable multi-vendor platform enabling 100+ local vendors with conflict-resolution logic to fulfil cross-merchant demand, improving order success rates by 30%. Built with Flutter, React Native, Supabase, and Google Antigravity
- A.I Voice Assistant (2024):** Developed a **Python**-based voice-controlled AI desktop assistant with hands-free system interaction; integrated SpeechRecognition, pyttsx3, OpenAI and Weather APIs, and automated WhatsApp messaging via voice commands - reducing manual input effort by 60%. Submitted to TATA Innovation Challenge 2025. Built with Python, NumPy, PyAutoGUI, SpeechRecognition.

Awards and Certificates

- Mentor at TCS:** Mentored 20+ onboarding candidates at TCS, to get better at problem-solving, coding, and system design skills, contributed to 30% faster project readiness and enhanced development efficiency.
- On the Spot** (Team Award) – TCS (2025)
- Infosys Springboard Ideathon - 2024
- Geo-processing using python, IIRS(ISRO) - 2023
